

Education Research Strategy

What is our role within JetBrains Research?

JETBRAINS Education Research

Anastasiia Birillo and the spirit of the team
JetBrains Research

JetBrains Research Vision and Current Status of Education Research

Applied Direction

Educational products

Hyperskill, JetBrains Academy, CospacesEdu

- **Hyperskill**: external company, **not JetBrains priority**
- **JetBrains Academy**: does not focus on the plugin, discovery phase, **no space for research**
- **CospacesEdu**: forming the strategy, **no clear goal** for research

Established products

IntelliJ IDEA, or any other IDEs

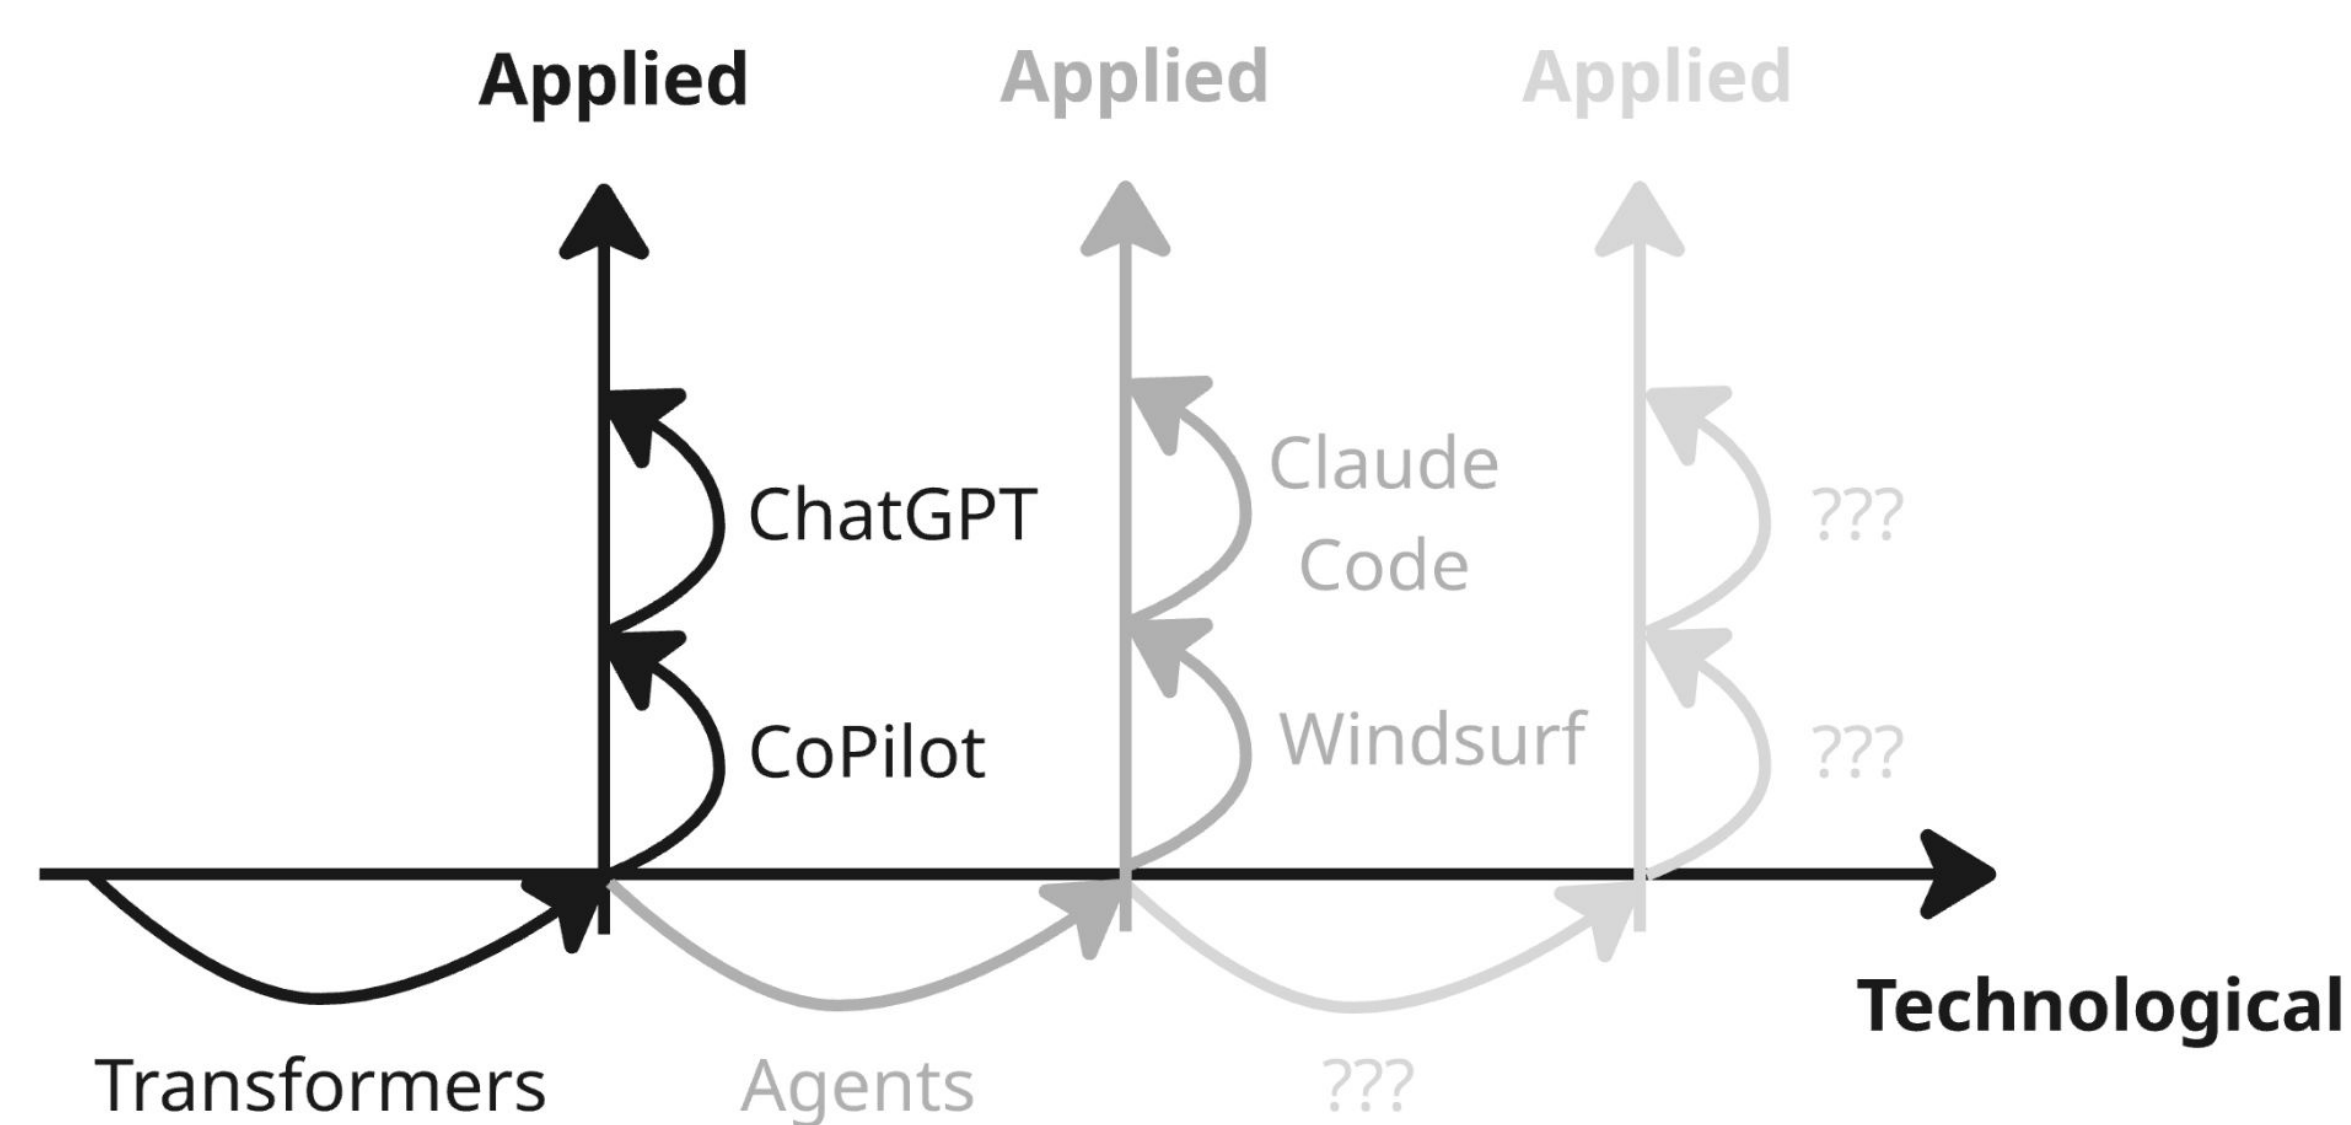

- Traditional way of learning, **outdated**
- Does not make sense to invest on that from the **edu perspective**

New products

Junie, Kineto, AI-Assistant

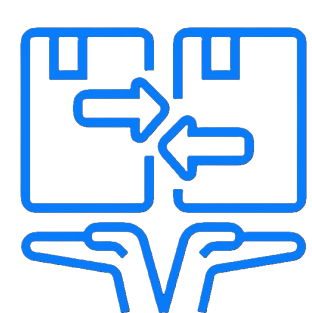

- Highly dynamic markets with **no clear direction**
- Don't focus on edu, still **searching** for product market fit

Technological Direction

It's unclear **how** the results or knowledge gained from research will be useful over time or **where** they will be applied.

Problem To Solve

Technology from technological division

Prototypes; out of scope for products

Place for growth

???

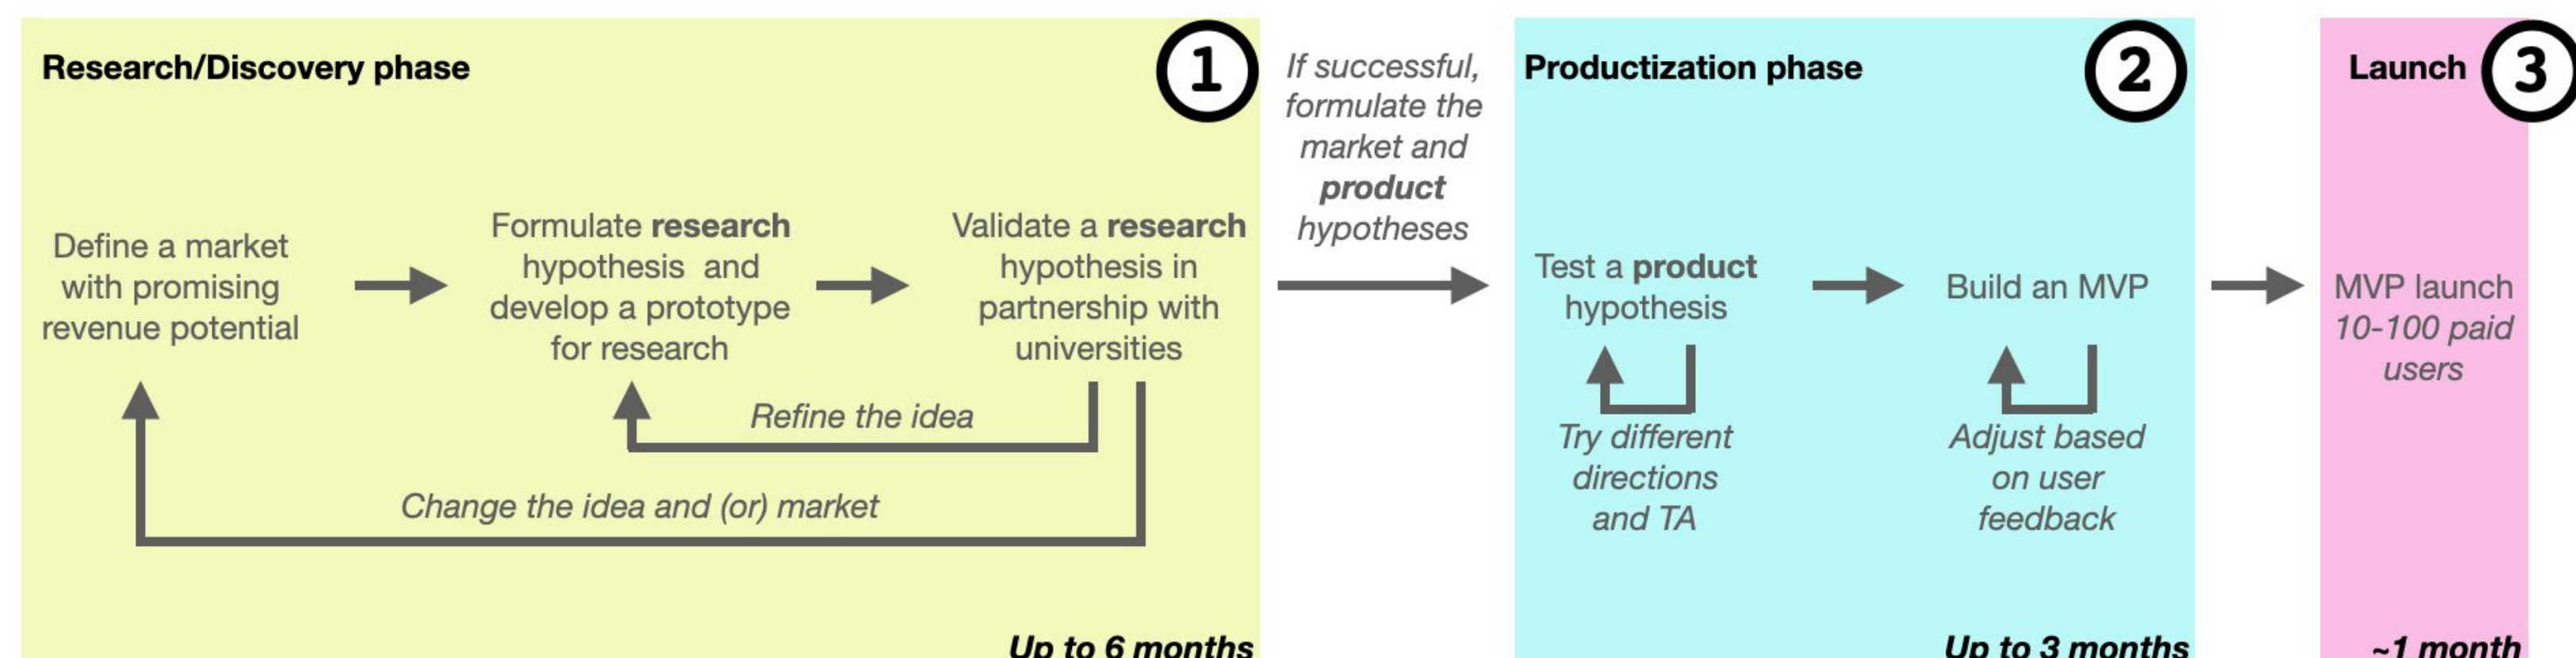

Magic

New exciting **product** launched

New Strategy

Educational Research Development Loop

- Focus on markets with **promising revenue**, not paying customers
- Align knowledge with promising **research areas**
- Explore **new markets** for JetBrains, e.g., non-professional programmers
- Identify problems to solve and **pain points**
- Publish papers and still focus on the **scientific aspect**

- Shift focus to **product-related** work over scientific research
- Prioritize **code quality** for real user needs
- Test core technology in **various** product applications

Why Education Research?

- Education domain is relatively **free** and **supported** by top management
- Team has **strong experience** in edu, allowing **Phase 1** to start immediately -> **faster** results
- Product and EdTech startup experience -> **smoother** transition

If the experiment succeeds, we might consider expanding into other areas

What do we need to succeed?

- Identify **promising** EdTech markets and **prioritize** those with strong research potential
- Improve **study design skills** through collaboration with University of Utrecht and ETH Zurich
 - *Experienced researchers can accelerate study design and access a large, diverse student audience*
- Maintain **visibility** and impact in SIGCSE by publishing papers, sharing insights, and contributing meaningfully
- Build **expertise** in product hypothesis testing to turn research ideas into viable products
