

IDEGym: Tooling-Enabled Sandboxes at Scale

Valentin Fondaratov, Ozren Dabić, Vseslav Kasatskii, Daniil Mironov, Vladimir Poliakov

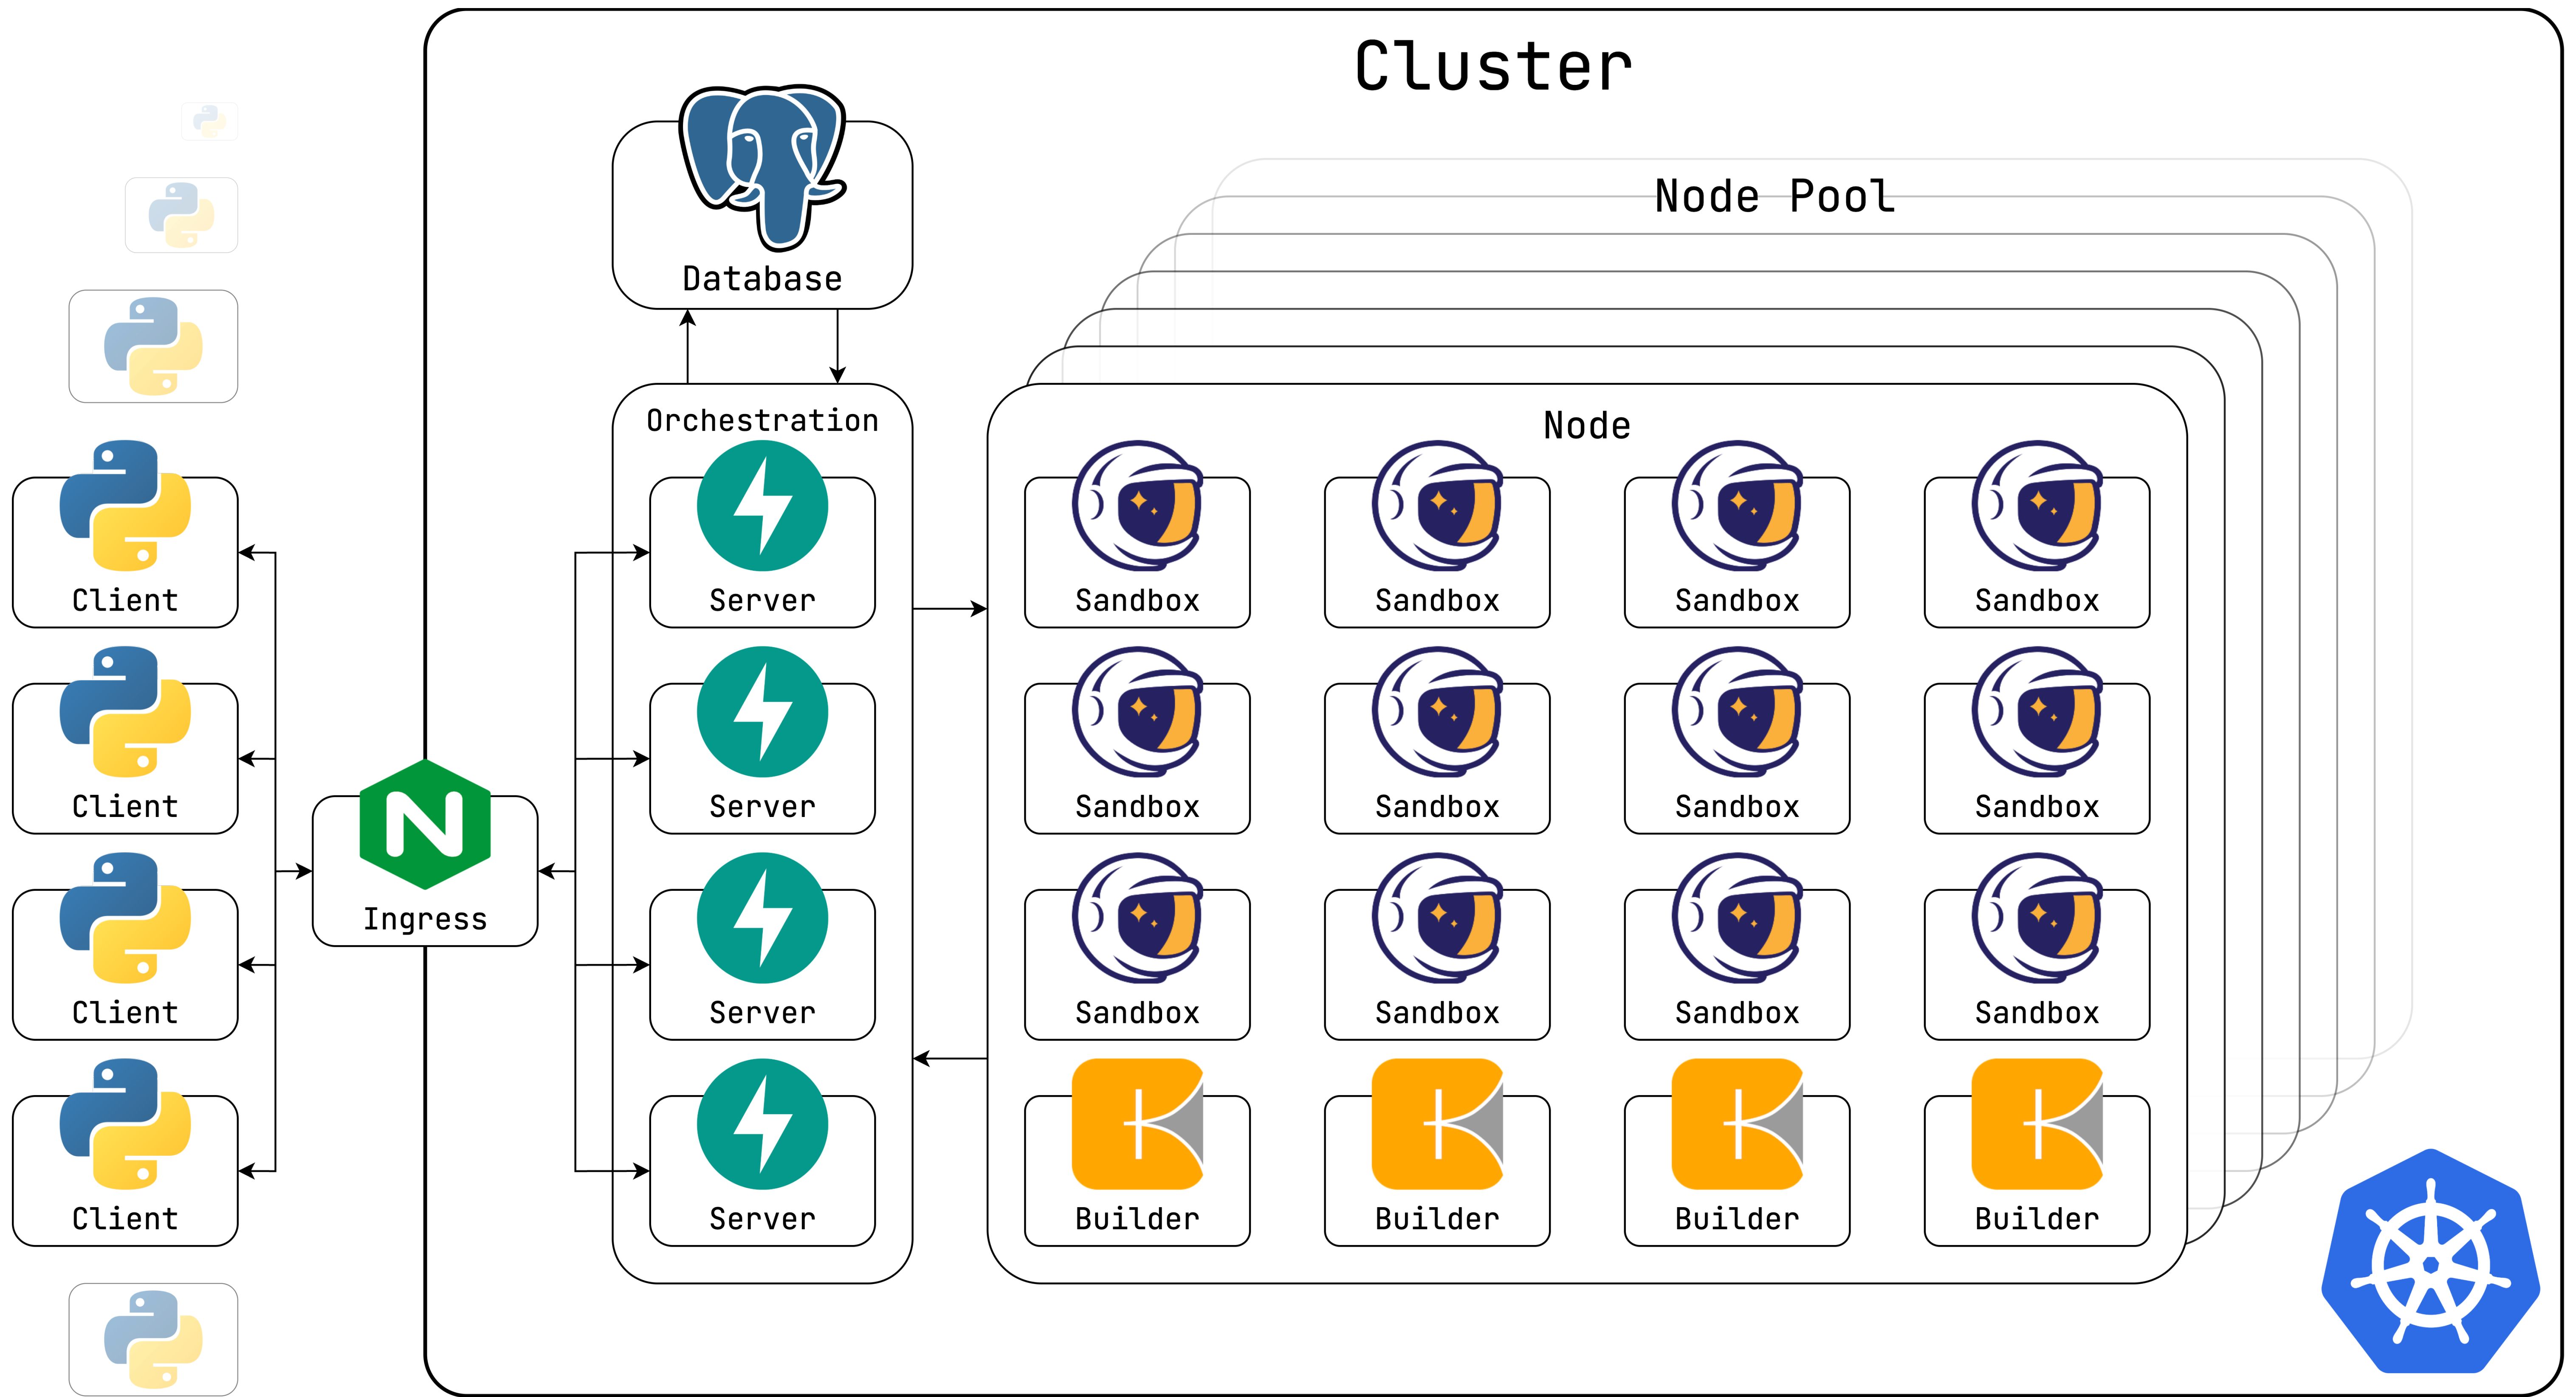

Scalable tooling-enabled sandboxes for reinforcement learning (RL), evaluation, agentic use and other application possibilities.

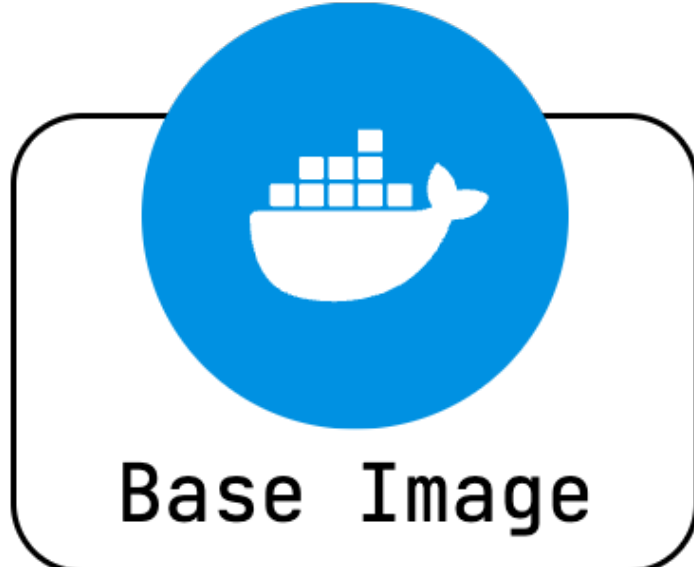

Idea

Since our products already provide a plethora of comprehensive and detailed inspections, how can we leverage them as rewards in an RL setup to improve the accuracy and quality of large language model (LLM) outputs?

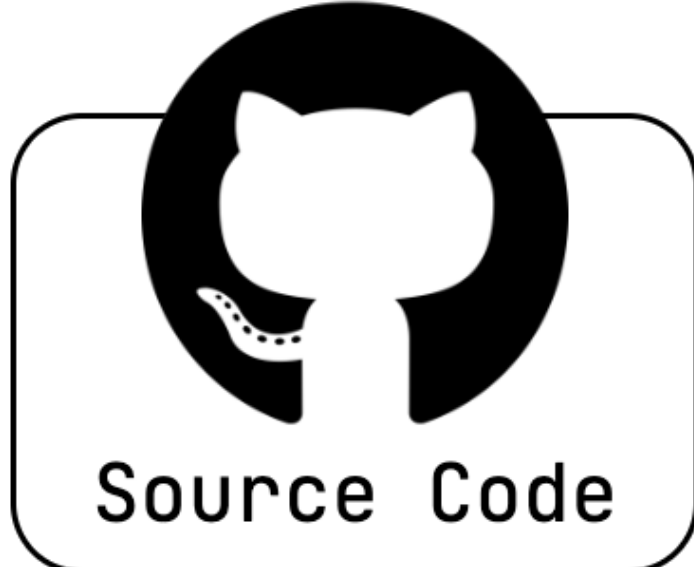

Architecture

Sandbox

Base Image

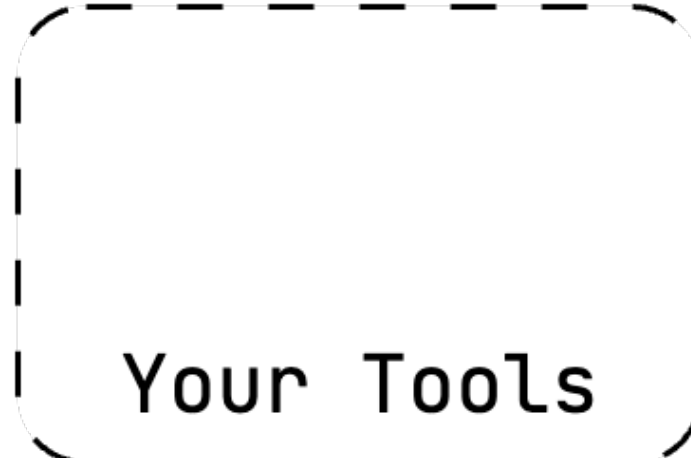

Source Code

Terminal

Qodana

Your Tools

Source Code

Features

- ▶ Detailed project inspections, courtesy of JetBrains Qodana.
- ▶ Secure and isolated sandbox environments with root access.
- ▶ Dedicated node pool with high CPU & RAM count and large disk storage.
- ▶ On-premise image building service for creating your custom sandboxes.

Applications

Code Modeling use it in their RL pipeline, rewarding LLM project adaptation with test-execution feedback.
Environment Setup train their bash-agent on Python projects, using pyright inspections as feedback.
